

# SUCCESS STORY

## Temporary Inventory Label

### THE SITUATION

One of our Distributor's Customers needed a temporary inventory label for a supplier of bathroom products and wholesale plumbing supplies imported from overseas. In some instances the existing temporary inventory labels that were being used were falling off the cartons which was creating an internal challenge.

### LABEL REQUIREMENTS

Printed with a barcode for internal inventory tracking and applied to the carton as it was received

The temporary label had to adhere to a wide variety of overseas corrugated materials

Label had to remove cleanly from carton

The carton was then re-labeled with customer shipping information once product was ordered

### RESOLUTION

I.D. Images recommended and tested a variety of materials and found a white matte "repositionable" material that fit the bill. The label did not fall off and it removed cleanly from the carton.

### CONSTRUCTION

4 x 7 1/2 rcr with an internal die cut to create 2 labels with identical bar code information. The small label is to be applied to paper and the larger label is applied to the corrugated box. White Matte with Repositionable Adhesive, printed yellow with black variable information bar codes.
