

## Make a Sustainable Statement with IDI Green Thermal Transfer Labels

Eco-Friendly Innovation with Uncompromised Performance

### THINNER, GREENER, SMARTER

By reducing the thickness from 2.7 mil to 2.5 mil, our labels cut down on material usage. While this may seem like a small adjustment, the impact on your environmental footprint is huge!

### FSC CERTIFICATION

Our labels are FSC certified, meaning the paper is sourced from responsibly managed forests that meet rigorous environmental and social standards. Choosing FSC-certified products helps protect forests and ecosystems worldwide.

### SAME DURABILITY & PERFORMANCE

Just because our labels are eco-friendly doesn't mean they compromise on quality. Our IDI Green labels offer the same durability, adhesiveness, and print quality you've relied on for years.
